Professional Summary

Data-focused Software Engineer with hands-on experience in Python, SQL, and data pipeline development, specializing in building scalable data processing tools and analytical solutions. Proven ability to design, automate, and optimize data workflows, ensuring high data accuracy and actionable insights. Strong foundation in pandas, SQL optimization, and end-to-end project ownership.

Education

BE-ELECTRONICS AND COMMUNICATION ENGINEERING

Aug 2021 – May 2025

Shree Venkateshwara Hi-tech Engineering College, Gobi

- CGPA: 7.8/10.0

- **Coursework:**Database Management Systems (SQL), Python Programming, Data Analytics Fundamentals

Technical Skills

- **Programming :** Python (Pandas, Numpy, Matplotlib)
- **Databases & SQL:** MySQL, SQL (Joins, Subqueries, Aggregations, CTEs)
- **Data Engineering, Data Processing Analysis:** Data Cleaning, Transformation, EDA, Data Validation
- **Tools:** Git, Streamlit, VS Code, PyCharm
- **Visualization:** Power BI (DAX basics), Excel (Advanced functions)

Experience

Junior Data Analyst - Pathfinder Business Analysis Pvt. Ltd.,Coimbatore

Sep 2025 – Dec 2025

- Designed and developed Python-based web scraping modules handling large-scale data extraction (200K+ records per run) and storing structured data in MySQL databases for downstream analysis
- Utilized SQL queries (joins, aggregations) to validate, transform, and analyze scraped data for accuracy and reporting
- Engineered reusable scraping architecture, enabling scalable data collection across different websites
- Improved data accuracy and pipeline reliability by implementing validation checks, exception handling, and optimized scraping logic
- Reduced manual intervention by automating data extraction workflows, improving processing efficiency by 30%

Projects

Multi-Website Data Scraping Management Tool (Streamlit) - Python, SQL

- Built and deployed an end-to-end data collection pipeline using Streamlit to automate multi-source data extraction
- Integrated Python scripts with structured data storage (Excel/MySQL), enabling one-click data ingestion pipelines
- Designed reusable workflows, reducing manual data collection effort and improving operational efficiency
- Enabled data analysis using SQL queries on collected datasets to generate actionable insights

Customer Segmentation using RFM Analysis -Python,Pandas

- Developed a customer segmentation model using RFM metrics on transactional datasets
- Transformed raw data into actionable segments (high-value, loyal, at-risk), supporting targeted business strategies
- Performed data preprocessing and feature engineering using pandas for accurate analysis

COVID-19 Data Analysis - Python, Pandas, NumPy, Matplotlib

- Processed and analyzed large-scale time-series datasets to identify country-wise and regional trends
- Implemented data cleaning pipelines to handle missing values and inconsistencies
- Generated visual insights to support comparative regional analysis

Certifications

- Meta Introduction to Data Analytics - Coursera
- Deloitte Australia Data Analytics Job Simulation on Forage - February 2026
- Python Programming - IFC Infotech Computer Education
